

HB 2807 -- RENEWABLE ENERGY STANDARD

SPONSOR: Hurlbert

This bill adds nuclear power sources to the definition of "renewable energy resources" for the purposes of the renewable energy standard.

The bill also changes an electrical corporation's portfolio requirement from no less than 15% to 7.5% of electricity from renewable energy resources in each calendar year beginning in 2026. An electrical corporation must reach an amount of renewable energy technology nameplate capacity equal to or greater than 7.5%, instead of 15% as currently provided, to be exempt from certain subsidies, fees, or rebates.

This bill is similar to HB 2657 and SB 838(2026).
